DESCRIPTION

Machine for tropicalization (thin film coating) of electronic boards by immersion in new generation, non-flammable solvent-based coating products.

The boards are placed on a specific holder and, as started the automatic cycle, they will be immersed in the coating fluid. During the lift-out, the boards dry quickly by passing through an area of cooling coils on which the solvent component of the coating product condenses while the polymer solidifies on the surface of the boards giving rise to a thin protective film.

As standard features:

- the system to keep a constant and controlled level in the immersion tank;
- creation and storage of treatment cycles by adjusting their rates, speeds and times;
- hermetic product storage tank.

|---------------------------|---|
| Model | 1S 4 + TA 10/1 |
| Type | Machine for electronic boards coating |
| Tank dimensions | 150 x 150 x 100 h mm |
| Coating Cycle | <ul style="list-style-type: none">• loading• immersion in coating product• drying• unloading |
| Machine dimensions | 900 x 900 x 2005 h mm |
| Weight | 300 kg |
| Installed power | 1,5 kW |
