

WE SERIES

Ultrasonic Cleaning Systems

DESIGNED FOR
HEAVY DUTY USE

HIGH ULTRASONIC
POWER

MAXIMUM ROBUSTNESS
AND RELIABILITY

EASY OPERATION
AND MAINTENANCE

LESS is MORE

WE CHOSE TO DO MORE FOR THE ENVIRONMENT EVERY DAY BY POLLUTION LESS

WE SERIES

Machines designed for the precision cleaning of parts from production lines or maintenance in several industrial sectors.

Ultrasonic combined with the cleaning power of specific detergents diluted in water remove contaminants from any surface, reaching even the smallest cavities in the most complex shapes.

Through the phenomenon of cavitation, ultrasonics create micro-bubbles which implode and detach the dirt from the surface.

They are built for intensive industrial use, even 24h/day, and to support heavy weight, while remaining compact and easy to move.

Included as standard features: level control, temperature control, timer for ultrasonic activation.

WHY CHOOSE IT

Maximum effectiveness and reliability

High versatility:
enables the cleaning
of various
components and accessories

Built for use in any
working environment

Low operating and maintenance costs

Entirely designed and built in Italy

APPLICATIONS

Mechanics, fine mechanics,
fashion accessories,
goldsmithing, jewellery,
small mould washing

STANDARD MODELS
